

**In The Claims:**

Please amend claims 28-52, as indicated below in the associated claim listing provided on separate sheets:

Claims 1-26 (Cancelled).

27. (Original) An arrangement for detecting or treating at least one of cardiac abnormalities and cardiac inconsistencies, comprising:
- a fluid delivery system adapted to systemically introduce a fluid to a target area of a heart of a subject, wherein a volume of the target area which receives the fluid is less than a volume of the heart; and
  - an energy source adapted to transmit energy to at least one portion of the target area.
28. (Currently amended) The arrangement of claim 27 ~~26~~, wherein the fluid is a compound.
29. (Currently amended) The arrangement of claim 28 ~~27~~, wherein the compound is a photodynamic compound.
30. (Currently amended) The arrangement of claim 27 ~~26~~, wherein the energy source is further adapted to transmit the energy to the entire target area.
31. (Currently amended) The arrangement of claim 27 ~~26~~, wherein the energy source is further adapted to transmit the energy to the entire heart.
32. (Currently amended) The arrangement of claim 27 ~~26~~, wherein the cardiac abnormality is a cardiac arrhythmia.

33. (Currently amended) The arrangement of claim 27 26, wherein the energy transmitted to the at least one portion of the target area comprises light.
34. (Currently amended) The arrangement of claim 27 26, wherein the target area comprises scar tissue.
35. (Currently amended) The arrangement of claim 34 33, wherein the scar tissue has a predetermined metabolism, and wherein the liquid is adapted to be received only by those areas of the heart having a metabolism which is greater than or equal to the predetermined metabolism.
36. (Currently amended) The arrangement of claim 27 26, wherein the liquid increases a sensitivity of the target area to energy such that the transmission of energy to the at least one portion of the target area damages at least one of a plurality of cells and a tissue within the target area.
37. (Currently amended) An arrangement for detecting or treating at least one of cardiac abnormalities and cardiac inconsistencies, comprising:
- a fluid delivery system adapted to introduce a fluid to a target area within a heart of a subject, wherein a volume of the target area which receives the fluid is less than a volume of the heart, and wherein a location of the volume of the target area which receives the fluid is provided at a distance independent from a location manner of an introduction of introducing the fluid to a portion of the subject the target area; and

an energy source adapted to transmit energy to at least  
one portion of the target area.

38. (Currently amended) The arrangement of claim 37 ~~36~~, wherein the fluid delivery system is adapted to systemically introduce the fluid to the target area.
39. (Currently amended) The arrangement of claim 37 ~~36~~, wherein the fluid delivery system is adapted to locally introduce the fluid to the target area.
40. (Currently amended) The arrangement of claim 39 ~~38~~, wherein the fluid delivery system is further adapted to locally introduce the fluid to the target area via a coronary vessel.
41. (Currently amended) The arrangement of claim 37 ~~36~~, wherein the fluid is a compound.
42. (Currently amended) The arrangement of claim 41 ~~40~~, wherein the compound is a photodynamic compound.
43. (Currently amended) The arrangement of claim 37 ~~36~~, wherein the energy source is further adapted to transmit the energy to the entire target area.
44. (Currently amended) The arrangement of claim 43 ~~42~~, wherein the energy source is further adapted to determine a location of the target area based on at least one predetermined criteria associated with the heart prior to transmitting the energy to the entire target area.

45. (Currently amended) The arrangement of claim 44 ~~43~~, wherein the at least one predetermined criteria comprises electrical activity within the heart.
46. (Currently amended) The arrangement of claim 37 ~~36~~, wherein the energy source is further adapted to transmit the energy to the entire heart.
47. (Currently amended) The arrangement of claim 46 ~~45~~, wherein the energy is transmitted to the entire heart without determining a location of the target area.
48. (Currently amended) The arrangement of claim 37 ~~36~~, wherein the cardiac abnormality is a cardiac arrhythmia.
49. (Currently amended) The arrangement of claim 37 ~~36~~, wherein the energy transmitted to the at least one portion of the target area comprises light.
50. (Currently amended) The arrangement of claim 37 ~~36~~, wherein the target area comprises scar tissue.
51. (Currently amended) The arrangement of claim 50 ~~49~~, wherein the scar tissue has a predetermined metabolism, and wherein the liquid is adapted to be received by only those areas of the heart having a metabolism which is greater than or equal to the predetermined metabolism.
52. (Currently amended) The arrangement of claim 37 ~~36~~, wherein the liquid increases a sensitivity of the target area to energy such the transmission of energy to the at least one portion of the target area damages at least one of a plurality of cells and a tissue within the target area.
